2

Aim of the project

Integrate knowledge from the sector with evidence-based strategies from other industries to produce specific guidance for enhanced fatigue management that can be practically applied in an agricultural context.

3

Learning and co-design

Workshops, interviews, surveys – learn from the experts about fatigue in the field.
Causes, consequences, controls.

Draft risk profiles for each sector with industry partners.

Develop fatigue guidance that can be used by organisations of different sizes and in different sectors.

Fatigue risk management system worked example – co-designed, simulations, test the materials.

Model to scale up and out.

4
